POLICOM Corporation
Economic Strength Rankings - 2024
By William H. Fruth

*"Economic strength is the long-term tendency for an area to
consistently grow in both size and quality."*

Salt Lake City and Bozeman Top Economies
in POLICOM's Annual National Rankings

The Salt Lake City, UT MSA is ranked the strongest Metropolitan Area in POLICOM's annual "Economic Strength Rankings." The area has been in the "top ten" nine of the last ten years.

Economic Strength is the long-term tendency for an area to consistently grow in both size and quality. POLICOM considers twenty-three economic factors over a 20-year period to determine the strength of an area.

Manufacturing is the most dominant contributory industry in the Salt Lake City area. With more than 65,000 people employed in Manufacturing, earning $5.8 billion, this sector accounts for about 31% of the contributory wealth in the area.

A strong presence of the State Government, Information Technology, Corporate Headquarters, and Finance & Insurance sectors cause the economy to be very diversified.

Defined by the Office of Management and Budget, Metropolitan Statistical Areas (MSA) have a city of at least 50,000 people and must be a minimum of one county, most include several counties. There are 384 Metropolitan Statistical Areas (OMB Bulletin 20-01).

Among the top ten Metropolitan Areas, all but Jacksonville, FL routinely appear on the list.

Comprised of five counties, the Jacksonville Metro has become Florida's "strongest economy" and has improved significantly in the rankings. Ten years ago, Jacksonville ranked 157th and has steadily improved since to 10th.

Salt Lake City, UT

Jacksonville, FL

Its economy is extremely diversified with five dominant primary industries.

Manufacturing and Finance & Insurance are the most important, which are followed closely by Transportation, Military, and Administration.

Bozeman, MT is ranked the #1 Micropolitan Area for the seventh straight year. It has grown in size and quality in a consistent manner for many years. However, this will be the last year Bozeman will be the #1 Micropolitan Area, as beginning next year it becomes designated as a Metropolitan Area due to the City of Bozeman reaching a population greater than 50,000 people.

Micropolitan Statistical Areas are "quasi-rural," smaller areas. A Micropolitan Area must have a city of at least 10,000 people, but fewer than 50,000. It must be at least one county and many are a single county. There are 543 Micropolitan Statistical Areas (OMB Bulletin 20-01).

One of the important criteria for POLICOM's rankings is the "consistency" of the economy.

Bozeman, MT

Since Micropolitan Areas are relatively small, thus less diversified, they are subject to rapid economic change, causing them to fluctuate, year by year, in POLICOM's rankings. If Mom lays off Pop at the corner store in Lamesa, TX (population 12,130), there might be a 5% drop in retail employment (just joking, Pop still works there).

As a result, a Micropolitan Area can drop 30 places in the rankings in one year and gain 30 the next.

Most of the top ten Micropolitan Areas have had reasonably good growth, but not the fastest growth. More important, they have grown in a very consistent manner, causing them to score well in the rankings.

Additionally, none of the top Metropolitan or Micropolitan Areas have a high degree of "poverty," which is one of the criteria for the rankings.

The graph visually compares the average of the ten strongest and weakest Metropolitan and Micropolitan Areas for relative Employment Growth from 2003 to 2022.
	384 Metropolitan Areas		543 Micropolitan Areas
2024	**Ten Strongest Metropolitan Areas**	**2024**	**Ten Strongest Micropolitan Areas**
1	Salt Lake City, UT	1	Bozeman, MT
2	Austin-Round Rock, TX	2	Heber, UT
3	Nashville, TN	3	Kalispell, MT
4	Raleigh-Cary, NC	4	Lebanon, NH-VT
5	Huntsville, AL	5	Helena, MT
6	Sioux Falls, SD	6	Jackson, WY-ID
7	Madison, WI	7	Concord, NH
8	Dallas-Fort Worth, TX	8	Fremont, NE
9	Indianapolis, IN	9	Ellensburg, WA
10	Jacksonville, FL	10	Pinehurst-Southern Pines, NC
2024	**Ten Weakest Metropolitan Areas**	**2024**	**Ten Weakest Micropolitan Areas**
375	Wheeling, WV-OH	534	Middlesborough, KY
376	Gadsden, AL	535	Raymondville, TX
377	Danville, IL	536	Summerville, GA
378	Cumberland, MD-WV	537	Kennett, MO
379	Kokomo, IN	538	Portales, NM
380	Pine Bluff, AR	539	Indianola, MS
381	Farmington, NM	540	Las Vegas, NM
382	Weirton-Steubenville, WV-OH	541	Forrest City, AR
383	Johnstown, PA	542	Clarksdale, MS
384	Beckley, WV	543	Helena-West Helena, AR

You can see the strongest areas grew rapidly, in a consistent manner (except for the Covid year 2020) for an extended period of time, while the weakest areas have been declining for 30 years. In the weakest areas, there were fewer people working in 2022 than in 2003.

The formulas used to create the rankings are designed to measure local, contained economies and cannot be applied to states.

State data is the sum of many local economies. When aggregated, the results can be misleading.

Within each state there are very strong and very weak areas, sometimes geographically adjoining each other. If the data for both was aggregated, the result would be an "average economy," which is not the case for either.

However, states do have tendencies or trends. The strength of the statistical areas statewide many times reflects the advantages or disadvantages of the state as a whole.

The chart provides a summary of the "improvement" the statistical areas have made in the rankings between 2024 and 2019 in the ten largest populated states.

The Metropolitan and Micropolitan Areas in Florida and North Carolina have significantly improved in economic strength since the 2019 rankings. Of the 68 statistical areas in these two states, only 3 declined from their ranking in 2019.

California and Pennsylvania unfortunately present the opposite condition. Of the 69 statistical areas in the two states, 65 declined in the rankings over the last five years.

.

Relative annual job growth of the average of the ten strongest and weakest Metropolitan and Micropolitan areas - 2003-2022.

Number of Metropolitan and Micropolitan Areas Which Improved in Economic Strength Rankings.
From 2019 to 2024 - Ten Largest States

	Number of METROS	Number Improved	% Improved	Number of MICROS	Number Improved	% Improved
Florida	22	21	95%	7	6	86%
North Carolina	17	16	94%	22	22	100%
Michigan	15	10	67%	18	12	67%
New York	12	5	42%	14	6	43%
Georgia	15	6	40%	24	16	67%
Texas	25	8	32%	46	11	24%
Ohio	14	4	29%	32	13	41%
Pennsylvania	18	2	11%	17	0	0%
Illinois	13	1	8%	19	8	42%
California	26	1	4%	8	1	13%

"Improved" means the area ranked better in 2024 than in 2019. If it did not improve, it declined.
Determined by subtracting the 2019 ranking from the 2024 ranking.

About the Rankings:

POLICOM specializes in studying the dynamics of local economies. From its research, it determines if an area is growing or declining, what is causing this to happen, and offers ideas and solutions to communities to improve the situation.

POLICOM addresses the condition of an economy from the viewpoint of its impact upon the "standard of living" of the people who live and work in an area.

The economic strength rankings are created so POLICOM can study the characteristics of strong and weak economies. The highest ranked areas have had rapid, consistent growth in both size and quality for an extended period. The lowest ranked areas have been in decline for a very long time.

POLICOM has created economic strength rankings for all Metropolitan Statistical Areas since 1996 and all Micropolitan Statistical Areas since they were created in 2002.

Statistical Area Definitions:

Metropolitan and Micropolitan Areas are geographically defined by the Office of Management and Budget (OMB), The White House. The definitions are announced through "Bulletins" issued by the OMB. The principal criteria to determine a statistical area is commuting patterns. A local economy is defined by where people live and work, earn and spend. Oftentimes this activity crosses county boundaries.

The 2024 Economic Strength Rankings are geographically based on OMB Bulletin 20-01 published March 6, 2020 (PDF of OMB Bulletin can be downloaded at www.policom.com). Data through calendar 2022 is based on these definitions.

However, on July 21, 2023, the OMB published Bulletin 23-01, which announced new definitions for the statistical areas based on the 2020 census and revised commuting patterns. More than 200 areas were affected including name changes, addition or removal of counties, mergers with adjoining areas, loss of designation entirely, and changing from a Micropolitan to a Metropolitan area or the opposite.

Federal data collection and publication reflecting the new definitions will likely not occur until mid to late 2024. 2025 Economic Strength Rankings will be based on the new definitions.

The economic strength rankings measure how the areas have behaved, not why.

Economic Strength Methodology:

The formulas used to determine economic strength measure how the economy has behaved, not what has caused it to perform. The following are the data sectors used to create the rankings.

Regional Economic Information System (REIS) data is the principal data set used to create the rankings. It is published by the Bureau of Economic Analysis (BEA), US Department of Commerce. The data set has been collected in a reasonably consistent manner using source data since 1969.

The Bureau of Economic Analysis released data for 2022 in November of 2023.

Industrial Sectors:

Group 1 – These sectors reflect the overall growth in size and quality. The "quality" of the economy is based upon what people earn, as individual earnings influence a person's "standard of living."

All Workers - Earnings
All Workers - Jobs
All Workers – Wages
Per Capita Total Worker Earnings
Per Capita Personal Income
Earnings by Place of Residence
Per Capita Earnings by Residence
Wage & Salaried Workers - Earnings
Wage & Salaried Workers – Jobs
Wage & Salaried Workers - Wages

Group 2 – These sectors reflect how the economy is behaving. Small businesses and the construction and retail industries are extremely reactive to the "flow of money" coming into an area. They typically grow or decline in direct proportion to the condition of the economy. There are, of course, exceptions. Areas, which have become destinations for retirement age individuals will have high growth numbers in both construction and retail, while they might not have a strong economy.

Non-Farm Proprietors - Earnings
Non-Farm Proprietors - Jobs
Non-Farm Proprietors - Wages
Construction - Worker Earnings
Construction - Jobs

Construction - Wages
Retail - Worker Earnings
Retail - Jobs
Retail - Wages

Group 3 – These sectors are negative sectors. Growth in these reflects a poor economy.

Per Capita Income Maintenance (Welfare)
Actual Per Capita Income Maintenance (Welfare)
Per Capita Medical Assistance for the Poor - (Medicaid)
Actual Per Capita Medical Assistance for the Poor – (Medicaid)

"Redundancy" and "counter balances" are built into the criteria, which compensate for anomalies that might occur in one or two of the items.

As an example, if an area has a very high percentage growth rate in Per Capita Income Maintenance (PCIM), it might mean the economy is on decline. However, percentages are funny things and can sometimes be misleading. It is much easier for an area with a low basis to have high percentage increases than an area with a high basis.

As an example, the Boulder, CO MSA had the fastest growth rate in PCIM for the ten years from 2013 to 2022, but the area ranked 383rd (2nd lowest) in the actual PCIM. While the rate of growth is brisk, "twice nothing is still nothing."

The reverse also occurs. The Pine Bluff, AR MSA ranked 370th for the rate of growth, but has the 24th highest PCIM.

Of course, there are the extremes. The Lawrence, KS MSA had the 2nd slowest growth rate and the 7th lowest PCIM, the best of both worlds. Unfortunately, the Danville, IL MSA had the 27th fastest growth rate and the 6th highest PCIM.

If only these criteria are used, the MSA's would be ranked in the following order: Lawrence, Boulder, Pine Bluff, and Danville.

POLICOM is also aware of anomalies in labor data. It has found economies, which are on decline, sometimes have a very high growth rate in the number of people employed in Retail Trade. Retail is a reactive industry, which grows and declines in direct proportion to the condition of the economy.

So how can retail jobs grow in a declining economy? It is because labor data counts full and part-time jobs all as "jobs." This means two part-time jobs are counted as two jobs in the data.

When an area is in decline, retailers switch from full-time workers to part-time workers. A small retailer might have four full time workers. If the retailer lays-off two full-time people but hires three part-timers to replace them, there is a statistical gain in the labor data of one job. The retailer now has five workers, in the data, which is a 25% increase from when there were four full-timers.

To counter balance or compensate, the total earnings and wages are included. Under the above scenario, both earnings and wages will decline; properly adjusting downward the area in the rankings.

Time Periods:

The average annual increase is calculated for each of the items for three periods.

Last five years: 2018-2022 – Weighted once.
Last ten years: 2013-2022 – Weighted twice.
Previous Ten Years: 2003-2012 – Weighted once.

The percentage increases are adjusted mathematically for consistency.

The growth rates are then ranked. The rankings are totaled. The areas are then ranked for economic strength based on their total overall score.

Consistency of Growth:

Simply identifying the areas that have the fastest or slowest growth rates is insufficient when trying to determine the character of a local economy. The rate, consistency, or stability of the growth is equally important.

Areas with unstable, boom and bust economies are difficult places to conduct business. Residents of these areas are subject to economic uncertainty and stress.

A merchant may lease extra floor space following three or four great years, only to go bankrupt after a subsequent economic decline. Residents might make long term financial commitments based upon rapid increases in earnings and employment, only to lose everything due to a sudden downturn causing massive layoffs.

Four full time jobs
If two full-time workers are replaced by three part-time workers …
there is a 25% increase in employment.

7

To better understand the nature of economic stability, we will examine the consistency of the construction industry for three areas, which had the same average annual percentage increase.

The first graph depicts a Mythical Area, which had an average annual percentage increase in Construction Employment of 5.4% from 2013 through 2022.

Mythical Area had a 5.4% increase in 2014. In 2015, it again had a 5.4% increase. Each year, the area increased exactly 5.4%. This means construction employers every year increased the number of people they employed by 5.4%.

As a result, by averaging the ten-year history, the Mythical Area obviously had a 5.4% average annual increase (AAI).

Most importantly, the area had perfect consistency as depicted by the straight horizontal line on the graph. The flow of money into the area, which supports this industry, grew in an absolutely consistent manner. This is a perfect situation. However, this is mythical, not reality.

Let us examine the economic stability of the Phoenix, AZ MSA. Phoenix, during the same ten years, had an AAI in Construction Jobs of 5.4%. This rate of growth ranked 32nd among the 384 metropolitan areas for the ten-year period.

The graph shows the percentage increase or decline each year. You can see the rate of growth is not absolutely stable.

While over the ten years it averages 5.4%, there are obvious fluctuations year by year. In 2014, employment increased only 1.7%, in 2018, it increased 8.8%, and in 2021 construction employment grew by only 2.7%. However, the average annual increase over the period was 5.4%.

For the ten years, rate of growth is not nearly as stable as the Mythical Area. The growth line is not straight but goes up and down, a little bit.

While the rate of growth of construction jobs for Phoenix is not absolutely consistent, it is considerably more stable than the Lake Charles, LA Metropolitan Area.
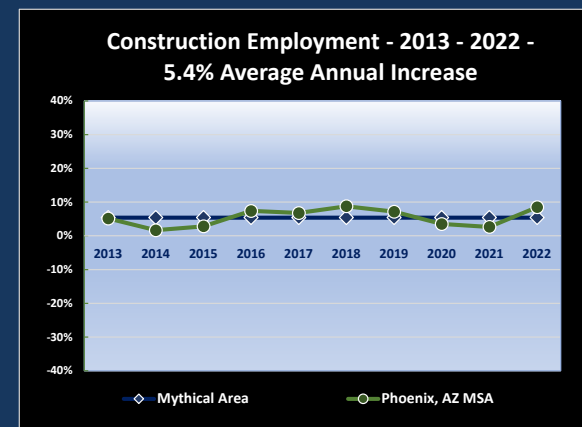

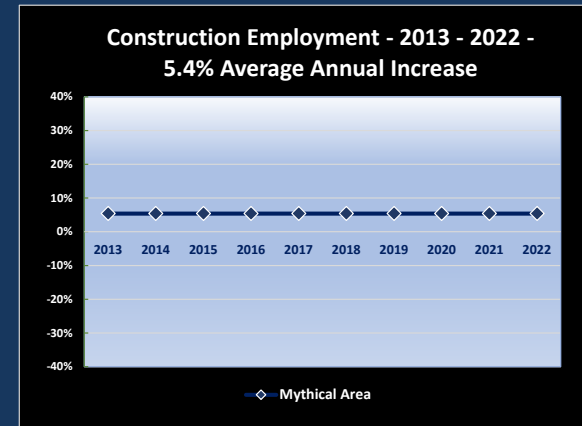

As with Phoenix and the Mythical Area, Lake Charles had an average annual increase of 5.4% over the ten years, ranking 33rd among the 384 Metropolitan Areas. As you can see in the graph, the rate of growth was extremely volatile.

In 2014, Lake Charles increased 34.3%, the next year only 1.3%, then up again by 30.0%, then up 26.4%. In 2019, the area declined by 10.6%, then down 30.0%, then up 5.00%, then down 17.1%. The line looks like the area is in "cardiac arrest."

Yes, believe it or not, the average of all of these years is 5.4%. How it happened is considerably different from Phoenix.

Obviously, simply relying upon economic growth percentages is not sufficient in order to determine the "character" of a local economy. Economic stability should be considered.

To measure economic stability, the difference or deviation in each successive year's percentage of growth is calculated (absolute number) and averaged, creating the Average Deviation from Previous Year (DEV).

To determine the measurable consistency of growth, the DEV is subtracted from the AAI. This number is used for POLICOM's economic strength rankings. Inconsistent economies area ranked lower than consistent economies.

After adjusting for consistency of Construction Employment, Phoenix ranked 19th and Lake Charles 302nd.

The following are the economic strength rankings for the 384 Metropolitan Statistical Areas and the 543 Micropolitan Statistical Areas. This is the 20th year POLICOM has ranked the areas using similar methodology.

> **POLICOM creates the economic strength rankings for its internal research purposes. The publication of the economic strength rankings by POLICOM is the result of "popular demand." Reliance upon the rankings for any purpose is solely at the discretion of the reader and POLICOM assumes no liability.**
