## Economic Strength Rankings - 2023

By William H. Fruth

*"Economic strength is the long-term tendency for an area to consistently grow in both size and quality."*

Across the board, areas in Florida and North Carolina gained in economic strength and Nashville, TN and Bozeman, MT are the top metropolitan and micropolitan areas in POLICOM's annual economic strength rankings.

Each year POLICOM ranks the nation's 384 metropolitan and 543 micropolitan areas for economic strength which is "the long-term tendency for an area to consistently grow in both size and quality."

Among Florida's 22 metropolitan areas, 21 of them gained in their ranking in 2023 when compared to the ranking in 2019. North Carolina also had significant improvement as 14 of its 17 metropolitan areas improved.

Conversely, a significant number of Pennsylvania and California metropolitan areas dropped in the rankings between 2023 and 2019 as 19 of Pennsylvania's 20 and 23 of California's 26 metropolitan areas declined.

The chart compares the ten most populated states. To determine how your state fared, go either metropolitan or micropolitan rankings, clip and paste the rankings and sort for your state. Simply subtract 2019 from 2023. Go to Videos to see how to sort for a state.

The Nashville-Davidson--Murfreesboro--Franklin, TN metropolitan area regained the top spot among the 384 areas (Ranked #1 in 2020 and 2019).

For the sixth straight year, Bozeman, MT (Gallatin County) is the strongest micropolitan area. With a population of 122,713 (13th highest among micros), Bozeman is large enough to provide a workforce to support an array of different primary industries, enabling it to resist recession and to grow economically.

The Lebanon, NH-VT Micropolitan Area (Ranked 3rd) is comprised of four counties and has a population of 223,471 (largest micro), which is more than 177 metropolitan areas. However, it does not have an urban center of at least 50,000 people, thus does not qualify as a metropolitan area.

Number of Metropolitan and Micropolitan Areas Which Improved in POLICOM Economic Strength Rankings between 2023 and 2019 - Ten Largest States.

Ten Largest States	Number of Metropolitan Areas	Number in rankings* which gained	% Improved	Number of Micropolitan Areas	Number in rankings* which gained	% Improved
Florida	22	21	95%	7	5	71%
North Carolina	17	14	82%	22	19	86%
New York	13	9	69%	14	9	64%
Michigan	14	8	57%	18	12	67%
Georgia	15	7	47%	24	17	71%
Ohio	13	5	38%	32	17	53%
Texas	22	7	32%	46	13	28%
Illinois	13	3	23%	19	10	53%
California	26	3	12%	8	1	13%
Pennsylvania	20	1	5%	17	2	12%

\* Based on subtracting the 2023 ranking from the 2019 ranking. As an example, if an area ranked 100 in 2023 and 120 in 2019, the area gained or improved by 20 places between the two years.

384 Metropolitan Areas 2023 Ten Strongest Metropolitan Areas		543 Micropolitan Areas 2023 Ten Strongest Micropolitan Areas	
1	Nashville-Davidson et al, TN	1	Bozeman, MT
2	Austin-Round Rock-Georgetown, TX	2	Heber, UT
3	Sioux Falls, SD	3	Lebanon, NH-VT
4	Huntsville, AL	4	Jackson, WY-ID
5	Raleigh-Cary, NC	5	Laconia, NH
6	San Jose-Sunnyvale-Santa Clara, CA	6	Kalispell, MT
7	Salt Lake City, UT	7	Wooster, OH
8	Madison, WI	8	Keene, NH
9	Olympia-Lacey-Tumwater, WA	9	Augusta-Waterville, ME
10	Indianapolis-Carmel-Anderson, IN	10	Ellensburg, WA

2023 Ten Weakest Metropolitan Areas		2023 Ten Weakest Micropolitan Areas

383	Johnstown, PA	542	Helena-West Helena, AR
384	Beckley, WV	543	Clarksdale, MS

POLICOM specializes in studying the dynamics of local economies. From its research, it determines if an area is growing or declining, what is causing this to happen, and offers ideas and solutions to communities to improve the situation.

POLICOM addresses the condition of an economy from the viewpoint of its impact upon the “standard of living” of the people who live and work in an area.

The economic strength rankings are created so POLICOM can study the characteristics of strong and weak economies. The highest ranked areas have had rapid, consistent growth in both size and quality for an extended period. The lowest ranked areas have been in decline for an extended period.

POLICOM has created economic strength rankings for all Metropolitan Statistical Areas since 1996 and all Micropolitan Statistical Areas since they were created by the Office of Management and Budget in 2002.

#### **Statistical Area Definitions:**

Metropolitan and Micropolitan Areas are geographically defined by the Office of Management and Budget (OMB), The White House. The definitions are announced through “Bulletins” issued by the OMB. The principal criteria to determine a statistical area is commuting patterns. A local economy is defined by where people live and work, earn and spend. Oftentimes this activity crosses county boundaries.

The 2023 Economic Strength Rankings are geographically based on OMB Bulletin 20-01 (PDF of OMB Bulletin can be downloaded at [www.policom.com](http://www.policom.com)) published March 6, 2020. The OMB has not made any changes to the definitions since.

#### **Metropolitan Statistical Areas:**

Metropolitan Statistical Areas have at least one urbanized area with a population of at least 50,000, plus adjacent territory (counties) which have a high degree of social and economic integration with the core as measured by commuting. They must have at minimum of one county but most include several counties.

There are 384 Metropolitan Statistical Areas (OMB Bulletin 20-01).

#### **Micropolitan Statistical Areas:**

Once looked upon as quasi-rural areas, a Micropolitan Statistical Area must have an urbanized area (city) with a population of at least 10,000 but fewer than 50,000. They must be at least one county and most are.

There are 543 Micropolitan Statistical Areas (OMB Bulletin 20-01).

**The economic  
strength rankings  
measure how the  
areas have  
behaved, not why.**

## **Economic Strength Methodology:**

The formulas used to determine economic strength measure how the economy has behaved, not what has caused it to perform. The following are the data sectors used to create the rankings.

Regional Economic Information System (REIS) data is the principal data set used to create the rankings. It is published by the Bureau of Economic Analysis (BEA), US Department of Commerce. The data set has been collected in a reasonably consistent manner using source data since 1969.

The Bureau of Economic Analysis released data for 2021 in November of 2022.

### **Industrial Sectors:**

Group 1 – These sectors reflect the overall growth in size and quality. The “quality” of the economy is based upon what people earn, as individual earnings influence a person’s “standard of living.”

All Workers - Earnings  
All Workers - Jobs  
All Workers – Wages  
Per Capita Total Worker Earnings  
Per Capita Personal Income  
Earnings by Place of Residence  
Per Capita Earnings by Residence  
Wage & Salaried Workers - Earnings  
Wage & Salaried Workers – Jobs  
Wage & Salaried Workers - Wages

Group 2 – These sectors reflect how the economy is behaving. Small businesses and the construction and retail industries are extremely reactive to the “flow of money” coming into an area. They typically grow or decline in direct proportion to the condition of the economy. There are, of course, exceptions. Areas, which have become destinations for retirement age individuals will have high growth numbers in both construction and retail, while they might not have a strong economy.

Non-Farm Proprietors - Earnings  
Non-Farm Proprietors - Jobs  
Non-Farm Proprietors - Wages  
Construction - Worker Earnings  
Construction - Jobs  
Construction - Wages  
Retail - Worker Earnings  
Retail - Jobs  
Retail - Wages

Group 3 – These sectors are negative sectors. Growth in these reflects a poor economy.

Per Capita Income Maintenance (Welfare)

Actual Per Capita Income Maintenance (Welfare)

Per Capita Medical Assistance for the Poor - (Medicaid)

Actual Per Capita Medical Assistance for the Poor – (Medicaid)

“Redundancy” and “counter balances” are built into the criteria, which compensate for anomalies that might occur in one or two of the items.

As an example, an area might have a very high percentage growth rate in Per Capita Income Maintenance. This might mean the economy is on decline. However, percentages are funny things and can sometimes be misleading. It is much easier for an area with a low basis to have high percentage increases than an area with a high basis.

Based on the 2019 rankings, the Gettysburg, PA MSA had the 29<sup>th</sup> fastest percentage growth rate (1.7%) in Per Capita Income Maintenance from 2011-2016 among the 383 areas (in 2016 there were only 383 defined areas). However, its Per Capita Income Maintenance in 2016 was only \$430, ranking 376<sup>th</sup>. While the rate of growth is high, “twice nothing is still nothing.”

The reverse also occurs. The McAllen, TX MSA had the highest Per Capita Income Maintenance (\$1,642) among the 383 metropolitan areas, but its five-year growth rate was slow, ranking 295<sup>th</sup>.

Of course, there are the extremes. The Ames, IA MSA ranked 356<sup>th</sup> in growth rate (a good thing) and had the 3<sup>rd</sup> lowest Per Capita Income Maintenance (another good thing). The opposite and worst situation is Monroe, LA MSA. It had the fastest growth rate and the 2<sup>nd</sup> highest Per Capita Income Maintenance.

If only these criteria are used, the MSA's would be ranked in the following order: Ames, Gettysburg, McAllen, and Monroe.

POLICOM is also aware of anomalies in labor data. It has found economies, which are on decline, sometimes have a very high growth rate in the number of people employed in Retail Trade. Retail is a reactive industry, which grows and declines in direct proportion to the condition of the economy.

So how can retail jobs grow in a declining economy? It is because labor data counts full and part-time jobs all as "jobs." This means two part-time jobs are counted as two jobs in the data.

When an area is in decline, retailers switch from full-time workers to part-time workers. A small retailer might have four full time workers. If the retailer lays-off two full-time people but hires three part-timers to replace them, there is a statistical gain in the labor data of one job. The retailer now has five workers, in the data, which is a 25% increase from when there were four full-timers.

To counter balance or compensate, the total earnings and wages are included. Under the above scenario, both earnings and wages will decline; properly adjusting downward the area in the rankings.

#### **Time Periods:**

The average annual increase is calculated for each of the items for three periods.

**Last five years: 2017-2021 – Weighted once.**

**Last ten years: 2012-2021 – Weighted twice.**

**Previous Ten Years: 2002-2011 – Weighted once.**

The percentage increases are adjusted mathematically for consistency.

The growth rates are then ranked. The rankings are totaled. The areas are then ranked for economic strength based on their total overall score.

#### **Consistency of Growth:**

Simply identifying the areas that have the fastest or slowest growth rates is insufficient when trying to determine the character of a local economy. The rate, consistency, or stability of the growth is equally important.

Areas with unstable, boom and bust economies are difficult places to conduct business. Residents of these areas are subject to economic uncertainty and stress.

A merchant may lease extra floor space following three or four great years, only to go bankrupt after a subsequent economic decline. Residents might make long term financial commitments based upon rapid increases in earnings and employment, only to lose everything due to a sudden downturn causing massive layoffs.

#### **Four full time jobs**

**If two full-time workers are replaced by three part-time workers ...**

**there is a 25% increase in employment.**

To better understand the nature of economic stability, we will examine the consistency of the construction industry for three areas, which had the same average annual percentage increase.

The first graph depicts a Mythical Area, which had an average annual percentage increase in Construction Employment of 1.1% from 2007 through 2016.

Mythical Area had a 1.1% increase from 2007 to 2008. From 2008 to 2009, it again had a 1.1% increase. Each year, the area increased exactly 1.1%. This means construction employers every year increased the number of people they employed by 1.1%.

As a result, by averaging the ten-year history, the Mythical Area obviously had a 1.1 average annual increase (AAI). The annual deviation from the previous year is 0%.

Most importantly, the area had perfect consistency as depicted by the straight horizontal line on the graph. The flow of money into the area, which supports this industry, grew in an absolutely consistent manner. This is a perfect situation. However, this is mythical, not reality.

Let us examine the economic stability of the Des Moines, IA MSA for the same element. Des Moines, during the same ten years had an AAI in Construction Jobs of 1.1%. This rate of growth ranked 20th among the 383 metropolitan areas for the ten-year period.

The graph shows the percentage increase or decline each year. You can see the rate of growth is not absolutely stable.

While over the ten years it averages 1.1%, there are obvious fluctuations year by year. In 2009 there was a decline of 9.7% while in 2014 construction employment grew by 11.2%.

For the ten years, rate of growth is not nearly as stable as the Mythical Area. The growth line is not straight but goes up and down. The average deviation from the previous year is 3.7%.

While the rate of growth of construction jobs for Des Moines is not absolutely consistent, it is considerably more stable than the Morgantown, WV metropolitan area.

As with Des Moines and the Mythical Area, Morgantown had an average annual increase of 1.1% over the ten years. As you can see in the graph, the rate of growth was extremely volatile.

In 2007, Morgantown had a decline of 3.9% while the next year a gain of 21.3%. In 2010, there was a loss of 17%, but once again it gained 10.2% the next year.

Yes, the average of all of these years is 1.1%. How it happened is considerably different from Des Moines as its average deviation from the previous year was 10.6%.

Obviously, simply relying upon economic growth percentages is not sufficient in order to determine the character of a local economy. Economic stability should be considered.

To measure economic stability, the difference or deviation in each successive year's percentage of growth is calculated (absolute number) and averaged, creating the Average Deviation from Previous Year (DEV).

To determine the measurable consistency of growth, the DEV is subtracted from the AAI. This number is used for POLICOM's economic strength rankings. Inconsistent economies area ranked lower than consistent economies.

The following are the economic strength rankings for the 384 Metropolitan Statistical Areas and the 543 Micropolitan Statistical Areas. This is the 18<sup>th</sup> year POLICOM has ranked the areas using similar methodology.

**POLICOM creates the economic strength rankings for its internal research purposes. The publication of the economic strength rankings by POLICOM is the result of “popular demand.” Reliance upon the rankings for any purpose is solely at the discretion of the reader and POLICOM assumes no liability.**
